# GENERAL INFORMATION

Kindly submit at least four or five selections in case your first choice is not available. Order your films as far in advance as possible. This is essential in view of the large number of bookings on the greater portion of our subjects. Give specific exhibition date or dates and state whether films will be shown morning, afternoon or evening.

Rental fees are based upon the time of the actual POSSESSION OF FILMS.

Programs must be returned PRE-PAID immediately after the last scheduled exhibition or charges will be made for every day held over after the originally scheduled show date. We check all return shipping time by Express Waybill and postal dates.

No program or any part thereof is to be held over at any time without phoning, writing or wiring prepaid for our permission. This is absolutely essential in that there are invariably play dates for other accounts immediately following. Your failure to return the films promptly as scheduled means disappointment and substitution for the next customer. You wouldn't want a substitution made for a program you have extensively advertised. For this reason we ask cooperation from every one of our hundreds of accounts.

Properly replace film bands on reels before returning films. DON'T REWIND FILMS after last showing. Insure all shipments at the rate of $20 a reel for each 400 ft. of 16mm. film. The renter pays all transportation charges on all shipments of films. Motion pictures returned to us by express are returnable at one-half of the outgoing express charges.

The renter assumes responsibility of all films while in his possession and assume the obligation of replacing destroyed, damaged or lost film.

Proper care should be taken of films at all times. Do not let them become dirty or scratched. Do not allow them to contact the floor or table. Never pull or jerk the film when rewinding. Do not expose to heat or dry air.

When splicing or repairing film never remove any more film than ABSOLUTELY NECESSARY. Any elimination, regardless of how small, disrupts the image and sound continuity. RETURN ALL FILM REMOVED OR CUT OUT.

Before operating projector, CLEAN ALL PARTS, through or over which film passes, with alcohol. Any dirt in these parts will scratch the image or sound track. All guide rollers should move freely. OIL SPARINGLY before EVERY operation.

Make positive sprocket teeth are properly engaged IN sprocket holes of film, otherwise considerable damage will result.

Make certain film is fit properly between the aperture plate and tension shoes on film gate, engaging intermittant claw teeth properly in sprocket holes.

Make certain to have proper size loops at every point where there should be a loop.

AFTER THREADING MACHINE TURN SLOWLY BY HAND TO MAKE CERTAIN FILM TRACKS PROPERLY.

Carefully read all instructions furnished with your projector.

16mm. films distributed through our offices are not to be used in competition with 35mm. theatrical showings but may be used for benefit performances in schools, churches, etc.

# RELIGIOUS FEATURES

## CHRISTUS

A reverent portrayal of the life of Christ. This is a picturization of the birth and life of Jesus Christ, the Saviour. The scenes were made on the actual locations as presented in the New Testament. We sincerely feel that, in presenting this special production, we are offering one of the finest religious films in the 16mm. field. It opens with an elaborate prologue fading in to the annunciation. Joseph and Mary leave Nazareth, Mary travel-worn rests in a crude shack. CHRIST is born. A heavenly light permeates the chosen stable and the star of the East shines brightly as the shepherds minding their flocks receive the glad tidings and while in silent adoration the sky is filled with Angels heralding the birth of the Saviour of the world — the flight to Egypt—the slaughter of the innocents — the return to Galilee — Christ among the doctors with outstretched arms casts a sinister shadow of the cross upon the floor. The sentence of Jesus to the Cross. Cruel spikes are thrust into his flesh and darkness covered all Judea with a mantle of shame. The tomb bursts open and Christ appears bathed in a heavenly light. He appears to Mary and others and later followed by a constantly increasing throng, he ascends into heaven surrounded by a halo of heavenly light and he fades into the heavens. The scene dissolves into a brilliant scene of the cross.

Here we have a story so tense, so absorbing, so massive in its spirit of munificent self-sacrifice and passionate grandeur, that its power and force is beyond description.

Among the records of the world's most tremendous historical events and in all the greatest writings of all times, nothing even remotely approaches the awe inspiring magnificence of the story of Jesus

## HELL IN EUROPE—BLITZKRIEG—7 Reels—AAA

Here is the first full-length war film in the 16mm. industry; in fact, in the entire motion picture industry, presenting actual scenes and details, beginning with instances that led up to the war, the capitulation of Austria, Czechoslovakia, Poland, Finland, Holland, Belgium and France, as well as the British and Grecian victories in northern Africa and Albania. There are thrilling scenes of the actual happenings throughout the present World War, showing tanks and airplanes in action, submarine battles, the sinking of vessels and all the instruments in this terrible war and depicting the horrors and conflagration created by gigantic bombers of opposing nations. It is so thorough and authentic in its presentation that it covers almost every detail in warring Europe and the tremendous havoc created by the terrible instruments of modern warfare.

This picture is being distributed to schools under the title of "Blitzkrieg" and for roadshowmen under the title of "Hell in Europe." For schools, it affords one of the most timely and modern educational subjects and, for the circuit operator, one of the most profitable pictures he could exhibit.

## Compare THESE 11 MAJOR FEATURES NOT FOUND IN OTHER EQUIPMENT

**1 PATENTED SAFETY FILM TRIP** — Film is automatically protected against damage at every point where emergency might arise. EXCLUSIVE.

**2 SWING OUT LENS MOUNT** — Easy access to film channel and aperture plate for removal of dirt and grit. Prevents scratches and abrasions. ANOTHER VICTOR EXCLUSIVE.

**3 DUAL FLEXO PAWLS** — This vitally important feature prevents damaging film perforations. Victor pawls will "spring-over" instead of *punch* holes in film.

**4 OFFSET FILM LOOP** — Provides simplest threading, permits film to flow naturally on one side of channel—prevents "screen image weave" and makes possible Victor's exclusive *single* over-sized feed sprocket for still greater film protection.

**5 SPIRA DRAFT LAMP HOUSE** — Unmatched efficiency — long lamp life — no over-heating of mechanism and projector body because of exclusive spiral draft action produced by unique lamp house and fan construction.

**6 VICTOR AMPLIFIERS** — Finer sound fidelity has been achieved through construction in Victor's own sound laboratories, where engineers specifically design for 16mm film requirements.

**7 TWO STABILIZING FILTERS** — In Victor's Sound Head construction, two separate revolving filters are used. No film speed variation can occur. Result — the World's finest sound reproduction. No additional gadgets or snubbers required.

**8 NO REFOCUSING FOR COLOR** — Victor's stationary Sound Drum is unique because exciter lamp can project a collimated beam through a wide angle lens that entirely eliminates necessity for making adjustments. No separate sound lens for color or reversed prints. No extra cost—No added confusion.

**9 PHOTO ELECTRIC CELL** — Variable voltage control is vitally important because it assures high efficiency and extra long cell life without over or under load.

**10 JACKS** — Simple plug-in attachments for large booster amplifiers, extra speakers, microphones and record turntables. All accessible from outside of the case.

**11 MULTIPLE-USE DESIGN** — Exclusive extra feature. Units can be added to basic sound projector making available combinations to perfectly care for every requirement. One projector unit serves all purposes.
